

A better bin system is coming to Vincent

From late October 2021, we will start moving to a three-bin service, which will include a FOGO (food organics garden organics) bin. There will also be a new, smaller 140LT red lid bin for general waste products.

What does this mean?

- The **GREEN LID FOGO BIN** is for food and organic waste such as fruit, vegetables, fish, garden and animal waste.
- The **YELLOW LID RECYCLING BIN** is for recyclables like plastic bottles, aluminium, paper, steel cans and glass.
- The **RED LID GENERAL WASTE BIN** is for general rubbish that cannot be composted or recycled, such as nappies, polystyrene and plastic bags.

Why FOGO?

- Right now, up to half the contents in our dark green waste bin is organic material.
- Under a FOGO system, we can divert this organic waste and turn it into high-quality compost.
- This will help reduce greenhouse gas emissions and make a positive and lasting impact on our environment.
- A FOGO bin system will be a great leap forward in our City's target of zero waste to landfill by 2028.

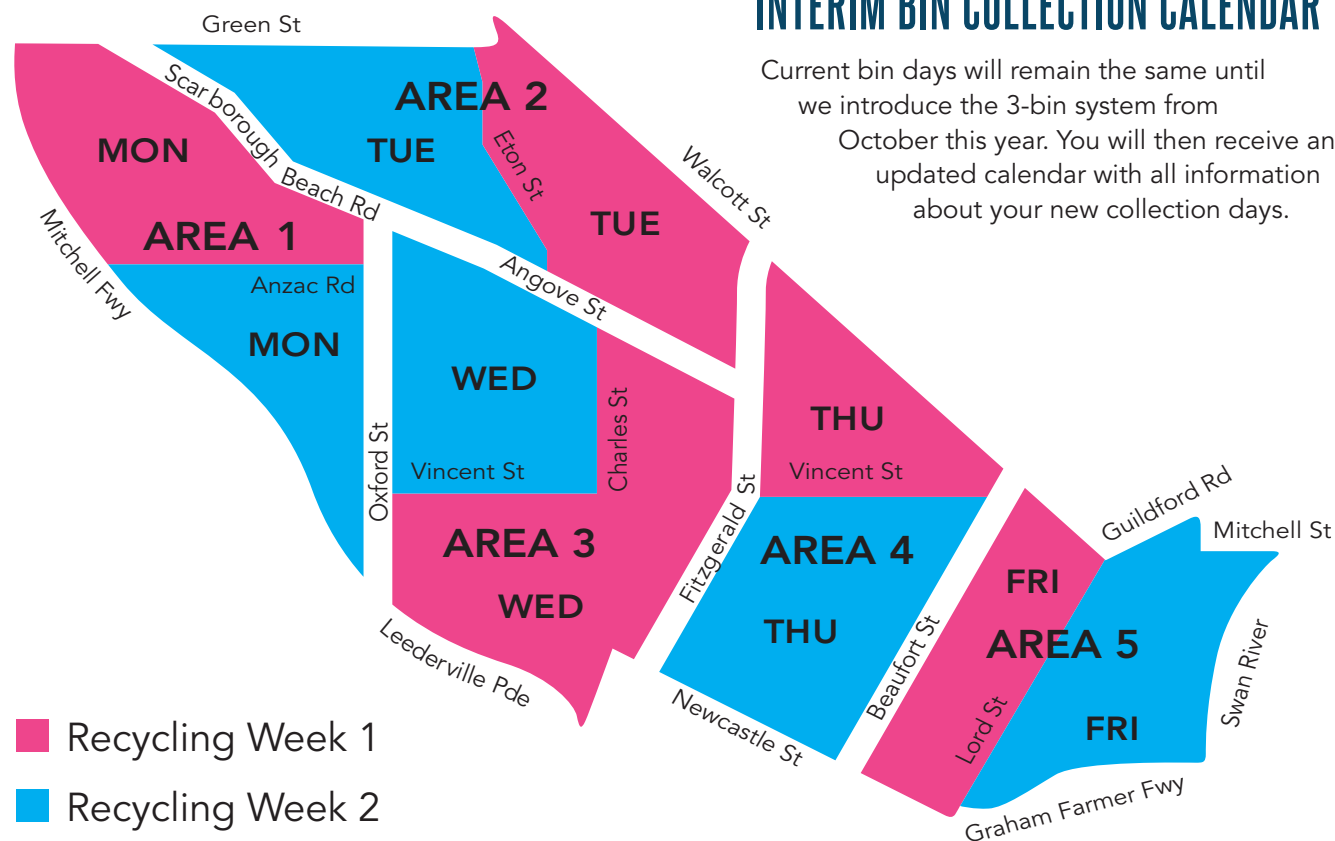

What is happening next?

Over the next few months, the City will be engaging with the community on the upcoming service change and will answer all questions about the new bin system.
